

Privacy Policy — Ocular AI

Last Updated: May 29, 2026

1. Introduction

Ocular AI is committed to maintaining the highest standards of data privacy and user security. This Privacy Policy outlines the strict operational parameters regarding how our mobile application accesses, processes, and handles device sensor data during runtime.

2. Local-Only Data Processing Model

Ocular AI operates under a **Zero Data Collection** architecture. The application does **NOT** collect, harvest, store, or transmit any personal identifying information (PII), camera image streams, video frames, telemetry positions, or audio recordings. All machine learning inference and data analysis take place instantly on your local device hardware.

3. Sensor & Hardware Access Specifications

Camera Interfacing

- **Purpose:** Access to the camera hardware layer is strictly used for real-time edge object detection, obstacle distance mapping, and ambient light analysis via the Jetpack CameraX API.
- **Data Retention:** Video frames are held transiently in system memory for immediate neural network inference and are destroyed immediately afterward via explicit native garbage recycling hooks. No images or video feeds are ever written to local storage or transmitted off your device.

Microphone Interfacing

- **Purpose:** Access to the device microphone layer is utilized strictly for evaluating localized speech capture to trigger voice navigation shortcuts.
- **Data Retention:** Audio waveforms are processed natively on-device by the runtime command recognition matrix. No voice files or acoustic signatures are recorded, stored locally, or broadcasted over network channels.

4. Network and Offline Execution

Ocular AI is architected to function entirely in **offline environments**. The application requires no internet connectivity, network sockets, or active wireless data links to run its core computer vision engine, ensuring absolute isolation from external interception risks.

5. Third-Party Libraries & Tracking

This application contains **no third-party data tracking tools, analytic SDKs, advertisement networks, or remote telemetry frameworks**. Your operational activity inside the app is completely hidden from third-party services.

6. Protection of Minors

Because Ocular AI does not collect, manage, or transfer any data or user accounts whatsoever, it does not intentionally or unintentionally collect information from children under the age of 13, remaining completely safe and compliant with global privacy frameworks.

7. Operational Policy Updates

We reserve the right to modify this structural privacy document from time to time to align with updated security protocols. Any updates to the app's permission behaviors will be actively maintained within this documentation resource.

8. Developer Contact Information

For formal validation or technical questions concerning the localized privacy structure of Ocular AI, please contact the primary developer directly:

- **Lead Developer:** Fazal Hammad Khan
- **Email Contact:** fazalhammadkhan@gmail.com
